Two soluble isoforms are also produced by alternative splicing. One of which, isoform 3/E6, is biologically active, while the other, isoform 4/E6Deltal6, is inactive.

ALTERNATIVE PRODUCTS: 4 isoforms; 1/6C (shown here), 2/5H, 3/E6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Identification of soluble and membrane-bound isoforms of the murine flt3 ligand generated by alternative splicing of mRNAs."; Oncogene 10:149-157(1995).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    McClanahan T., Culpepper J., Campbell D., Wagner J., Franz-Bacon K., Mattson J., Tsai S., Luh J., Guimares M.J., Mattel M.-G., Rosnet O., Birnbaum D., Hannum C.; Submitted (Apr-1965) to the EMBL/GenBank/PDBJ databases.
-!- FUNCTION: STIMULATES THE PROLIFERATION OF EARLY HEMATOPOLETIC CELLS. SYNERGIZES WELL WITH A NUMBER OF OTHER COLONY STIMULATING FACTORS AND INTERLEUKINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Structural analysis of human and murine flt3 ligand genomic loci."; Oncogene 11:1165-1172(1995).

"The nucleotide sequence of a segment of Trypanosoma brucei mitochondrial maxi-circle DNA that contains the gene for apocytochrome b and some unual unassigned reading frames."; Nucleic Acids Res. 11:6925-6941(1983).
-!- FUNKTION: COMPONENT OF THE UBIGGINOL-CYTOCHROME C REDUCTASE COMPLEX (COMPLEX LII OR CYTOCHROME B-C1 COMPLEX), WHICH IS A RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
                                                                                                                                                                                                                                                                                                                 BOUND TO THE PROTEIN.
-!- SUBUNTY: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B, CYTOCHROME C1 AND THE RIESKE PROTEIN.
-!- SIMILARITY: BELONGS TO THE CYTOCHROME B FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (JUN-1995) to the EMBL/GenBank/DDBJ databases.
-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
SIMILAR TO S.POMBE DSK1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Saccharomyces cerevisiae (Baker's yeast).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

| Patent No. US20020159992A1
| GENERAL INFORMATION:
| APPLICANT: Abbott Laboratories
| APPLICANT: Abott Laboratories
| APPLICANT: Davidson, Donald J.
| TITLE OF INVENTION: ANTIANGIOGENIC POLYPEPTIDES AND METHODS
| TITLE OF INVENTION: FOR INHIBITING ANGIOGENESIS
| FILE REFERENCE: 6738.US.02
| CURRENT FILING DATE: 2001-09-26
| PRIOR APPLICATION NUMBER: US 60/236,550
| PRIOR FILING DATE: 2000-09-29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 791;

Nucleic Acids, Proteins and Antibodies

Sequence 1017, Application US/09925301 Patent No. US20020052308A1

US-09-925-301-1017

RESULT 15

GENERAL INFORMATION

APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins
FILE REFERENCE: PA106
CURRENT APPLICATION NUMBER: US/09/925,301
CURRENT FILING DATE: 2001-08-10
PRIOR APPLICATION NUMBER: PCT/US00/05882
PRIOR FILING DATE: 2000-03-08
PRIOR APPLICATION NUMBER: 60/124,270
PRIOR FILING DATE: 1999-03-12

Patentin Ver. 2.0

NUMBER OF SEQ ID NOS: 1694 SOFTWARE: Patentin Ver. 2.

SEQ ID NO 1017 LENGTH: 248

; ORGANISM: Homo sapiens US-09-925-301-1017

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention relates to novel serine proteases designated BSSP5

(AABI1710-B11711), and to nucleic acids encoding them (AAA61733-A61734).

The invention also relates to vectors and transformants comparising BSSP5
nucleic acids; transgenic animals in which the expression level of BSSP5
nucleic acids; transgenic animals in which the expression level of BSSP5
can be varied; and an mBSSP5 knockout mouse. The invention additionally
antibodies, methods of BSSP5 antibodies and methods of production of such
medical conditions, e.g., pancreatist as diagnostic markers for certain
medical conditions or fragments as diagnostic markers for certain
medical conditions, e.g., pancreatitis. A method for detecting
ancreatitis comprising measuring BSSP5 concentration in the blood or
urine, and a pancreatitis diagnostic agent containing an anti-BSSP5
curine, and splo disclosed. Nucleotides encoding BSSP5 were initially
isolated in a human brain cDNA library using degenerate PCR primers
(AAA6174-A61745) based on conserved regions of serine proteases. The
BSSP5 serine proteases and nuclectides encoding them are useful in
detecting homologues, mutants and polymorphic variants in biological
samples (e.g., blood, urine, brain, prostate gland, placenta, teetis,
pancreas and spleen) as diagnostic markers for conditions such as
Alzheimer's disease, epilepsy, cancer, inflammation, infertility,
pancreatitis and prostatic hypertrophy. Sequence AAB11711 represents murine BSSP5
chuman BSSP5
characteric proper account and sequence AAB11711 represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GGSLISPNWVVTAAHCQVTPGRHFVVLGEYDRSSNAEPVQVLSIARAITHPNWNANTHNN 120

The invention letaces to novel settine proceases designated bases.

The invention also relates to vectors and transformants comprising BSSP5 nucleic acids; transgenic animals in which the expression level of BSSP5 cucleids; transgenic animals in which the expression level of BSSP5 cucleids; transgenic animals in which the expression level of BSSP5 cucleids and am mBSSP5 knockout mouse. The invention additionally encompasses anti-BSSP5 antibodies and methods of production of such antibodies, methods of BSSP5 detection using the antibodies, and the use of BSSP5 proteins or fragments as diagnostic markers for certain medical conditions, e.g., pancreatitis. A method for detecting comprising measuring BSSP5 concentration in the blood or urine, and a pancreatitis diagnostic agent containing an anti-BSSP5 antibody is also disclosed. Nucleotides encoding BSSP5 were initially isolated in a human brain orNA library using degenerate PCR primers (AAA6174-A61745) based on conserved regions of serine proteases. The BSSP5 serine proteases and nucleotides encoding them are useful in the BSSP5 serine proteases and nucleotides encoding them are useful in samples (e.g., blood, urine, brain, prostate gland, placenta, testis, pancreas and spleen) as diagnostic markers for conditions such as alreading and prostatic hypertrophy. Sequence AAB1171 represents murine BSSP5 human BSSP5 (hBSSP5), and sequence AAB1171 represents murine BSSP5).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 GGSLISQSWVYTAAHCNVSPGRHFVVLGEYDRSSNAEPLQVLSVSRAITHPSWNSTTMNN 120

The human pancreatic cancer antigens have cytostatic.

Consideration of the human pancreatic cancer antigens have cytostatic, contraceptive, neuroprotective, neotropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antilifammatory activities, and can be used in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer.

Consideratic cancer antigen polynucleotides can be used to design nucleic actd hybridisation probes that can be used in chromosome mapping, linkage and hybridisation probes that can be used to generate antibodies and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including the proteins can be the protein methods. The proteins can diagnostic methods. The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. inflammatory disorders (e.g. disorders), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. rheumatoid arthritis and postiasis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias.

The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. glaucoma) and macular checked in the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; protease; cancer; immune-related disorder; cardiovascular disease; neuronal-associated disease; metabolic disorder; inflammatory disorder; nervous system disorder; sexual dysfunction; pain; mood disorder; hypertension; psychotic disorder; neurological disorder; dyskinesia; viral infection; human immunodeficiency virus; HIV; non-viral infection;
                            Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory disorders
